

Chain Load Cell System

Chain Load Measuring System

Custom Designs and Variations:

The ONETEC chain cell provides an accurate, rugged and practical solution to normal methods of load measurement on chain hoists. This simple design/construction allows for extreme ease of installation into standard lifting chain, just sever a link and bolt the chain cell in line.

Our standard chain cell output is suitable for direct connection to handheld, DIN rail, panel mount and our large digit displays.

This design provides an accurate, rugged and practical alternative to traditional methods of measuring the load on chain hoists.

Specifications:

| Model | Working Load |
|-------|--------------|
| 8mm | 2,000 kg |
| 10mm | 3,200 kg |
| 13mm | 5,400 kg |

Quotations:

To obtain a quotation the following Chain Information and Dimensions are required.

Link Size.

Pitch of Links.

Width of Links.

Type of Display required.
